

# VII. LINKS BETWEEN PATHOGENS AND DISEASES

## 1. Acne

Look into Parasites - mainly tapeworms although roundworms must be seriously investigated.

Mites can be another reason as well as many, many other drastic and viral infections.

There is definitely no direct link with any single pathogen or non-biological agent. It could be anything especially Nanotechnology.

## 2. Allergies

Parasites, parasites, parasites!!!!!! - mainly roundworms from Ascaridae group.

But tapeworms would be the second line of search.

And then we have dozens of other leads - other parasites, nanotechnology, heavy metals, prions - the list has almost no end.

Chemtrails is the clear cause of contamination inhaled by all humans in every corner of this planet.

The critical thing to highlight here is the fact that silly testing to detect any form of allergy and not looking at the root source of the problem is criminal.

OUR BODIES ARE NOT DESIGNED TO DEVELOP ANY FORM OF ALLERGY. THERE IS ALMOST CERTAINLY A FOREIGN AGENT THAT TRIGGERS THE CONDITION SIMILARLY TO SO CALLED AUTOIMMUNE DISEASES.

## 3. Alopecia Areata & Hair Loss

The loss of hair in women is caused in many cases by Lyme Disease. Other than loss of pigmentation on the skin this is another visual sign of Lyme Disease. Some parasites can lead to it as well as Morgellons disease.

With Men we have a little more difficult problem. I would never link loss of hair in men with Lyme although it is always important to check for Lyme.

My latest Vega Test investigation has taken me to link the loss of hair some form of Morgellons or nanotechnology which comes from Chemtrails.

For correct frequency use the latest upgrade from the Holy Grail Section.

#### **4. Alzheimer's Disease**

Simply check for Lyme Disease and Prions.

In addition, check for all sorts of Protozoa. They love to dwell in the brain. Plus all Neurological Viruses.

MS or MG may not become transparent early in your life but they can affect the memory and then "dissolve" your brain tissue slowly over many years.

Nanotechnology and Morgellons is the next layer of diseases which can decimate your healthy cells in the brain.

#### **5. Anaphylactic Shock**

I cannot give any guarantees, but this is my theory - the first thing we have to ask ourselves what is anaphylactic shock or more precisely what causes it - the answer is toxins!

In case of bees, snakes, spiders - it is toxin in form of a venom. The process of anaphylactic shock is - too much toxins make your body to shut down.

Well - some might ask: what about pea nuts? Well, perhaps those people are already fighting a large doze of toxins which need to be processed by their bodies in form of parasites or Lyme...

This is only a theory which will be explored - but before I finish - a simple question: what is the most toxic parasite on this planet? The answer is Echinococcus. And all patients suffering from allergies should be checked for this parasite.

To my knowledge there inso other parasite which is this lethal whether as a toxin or as a cyst.

## **6. Ankylosing Spondylitis**

Start with Lyme. It is a chronic inflammation of the spine. Eliminate Lyme and Co. and see what happens. Run the universal frequency and this should put the stop to the inflammation. See the end of the book.

Also - Morgellons and Nanotechnology has to be considered as a direct cause.

## **7. Anxiety Disorders**

Start with Lyme. It is a neuro disease and has a massive impact on well-being as well as on anxiety levels.

Electronic harassment and Mind Control technology is your next line of search.

Use the most advanced upgrade included int he book or on the web site.

## **8. Arthritis**

What is Arthritis - it is an infection!

Why we cannot cure arthritis (even if we were coping with bacteria alone) - the reason is simple - antibiotics are delivered with blood stream. And there is no flow of blood through joints. So the Western

medicine came up with this wonderful explanation for anything drugs cannot treat let alone cure successfully - an autoimmune disease!

Ha. Please refer to Section 7 for my views on the definition of autoimmune diseases.

Now - what to look into:

Check for Lyme Disease first.

Major parasite can affect joints.

The look at all STDs!!! - See Section STDs

Heavy metals

Nanotechnology

Other toxins

The list is very long and cannot be reduced to the knowledge proposed by Western Medicine. Use your mind in exploring other revenues! Any toxin if trapped inside the joints can lead to inflammation and by default - PAIN.

## **9. Asperger Syndrome**

My greatest suspicion and hope is that this horrific condition is caused by Nanotechnology - a new type of a disease.

But while this research is ongoing the first thing to confirm is Lyme Disease and all central nervous system parasites. If positive with Lyme eliminating Lyme may come to aid. But my suspicion is that eliminating Lyme is not enough.

There are some striking similarities to behaving of other mammals and this must be the source of contamination.

Some of the viruses linked to exotic animals could be the root cause too.

## **10. Aspergillosis**

Remember - this is incurable disease according to NHS!

What is more important to remember is that it is never on its own and you have to check everything linked to lungs. See more details in Section - Lungs.

Use the most advanced upgrade included in the book or on the web site.

## **11. Asthma**

Asthma is simply an infection. It is an infection caused by all types of parasites including ectoparasites. This is not autoimmune disease. Remove all infections and lungs go back to normal.

See Lungs section for what to investigate.

## **12. Attention Deficit Hyperactivity Disorder (ADHD)**

Almost certain to be Lyme Disease...

Some nasty viruses and nanotechnology can be at source.

## **13. Autism and Autism Spectrum Disorders**

Always check for Lyme first.

Then check for Autism Virus and heavy metals. Both should be very high if proper diagnosis is made with kinesiology or Vega Test.

Where does it come from - see chapter on "There is nothing wrong with vaccinations - except..."

## **14. Autoimmune Diseases**

Please refer to [Section - Other Stories](#).

## **15. Back Pain**

Do you want to believe that back pain is mostly caused by mechanical damage? I will strongly disagree!

Each time we feel the back pain we associate it with injury through lifting heavy things. In minor cases yes - but in majority of cases it is either a combination of mechanical injury and infection or in my view mainly infection with various pathogens.

Here is what I think - the starting point is to look into:

Trichinella

Meningonema Peruzzi

All STDs

Yersinia

Streptococcus - All Types

And obviously Lyme Disease

Other pathogens could be:

Enterobacter and

Enterovirus

Only after you have eliminated these pathogens only then blame the lifting for the back pain.

One final thing - pathogens can “eat” into your bone and tissue causing irreversible damage. Hence the pain. A bit like with Arthritis. Back pain is almost identical in mechanism. So - remove all infections and see what happens.

Finally - with back pain anything can be involved and the full test for all pathogens should be completed. Once the damage is made then everything and anything loves that weak spot.

Latest discoveries show toxins and Morgellons are also at large responsible for the lower back pain and also Lyme must be considered.

## **16. Bladder (Infection)**

This will probably come as a shock but my first search would be into Paragonimus!

Then obviously every other parasite including Bladder Fluke.

Then as per NHS definitions:

Eschecheria Coli  
and all you can find on Google. But Paragonimus tops my list.

The simple summary is - parasites first and then smaller microorganisms.

## **17. Bipolar Disorder**

I suspect this is related to a very specific virus but I cannot confirm whether that is the case.

However - the starting point is Lyme Disease. Lyme has a major impact on brain and mind! It makes you suicidal, it makes you depressed, it makes you angry, it makes you very emotional.

Electronic harassment, mind control and microwave weapons should be considered too.

## **18. Bleeding Disorders**

All internet sources are pointing at HIV and Hepatitis.

However - my suggestion would be to run full test of all parasites from A to Z. Anything can be hidden behind this disorder. The main suspect would be Schistosome and VHF's. Refer to Section of VHF's on more details. (Viral Haemorrhaging Fevers).

Normally this type of issue means one or more organs are badly affected and big things like parasites should also be focused on.

## **19. Blindness and Low Vision**

Refer to Section - Eyes.

Check for Eye nematodes!

## **20. Bone Marrow**

Bone Marrow can be affected by all sorts of pathogens. Obviously the starting point are the parasites. My biggest discovery is - there is one very specific parasites capable of major destruction of the bone marrow. It is called Meningonema (Perruzzi).

In addition - and this does not surprise me at all - there is a virus which specifically affect bone marrow and is a major contributor to any form of bone disease. I simply called it Bone Virus. There are quite a few strains involved and I personally experienced the effect of this virus.

I believe I began developing Paget's disease which manifested in a pain in my upper arm and only in one small section of the bone. The pain reached the level where I struggled to make basic lifting. After removal of both pathogens my arm has gone slowly back to normal.

Testing people with all sorts of problems always shows these two pathogens to be involved. However - this does not guarantee there is not anything else - e.g. Malaria, Babesia and/or other pathogens. If the problem persists my suggestion is to run with Lyme Disease and any other Filariae.

## **21. Bones**

Look at Section - Bone Marrow.

## **22. Botulism**

This is a simple fix except you have to cover the whole range of Clostridium.

Do not forget to check for all possible parasites and pathogens as found in Section - Intestines.

## **23. Bowel Problems**

See Section - Intestines.

## **24. Bronchitis**

See Section - Lungs. All applicable to lungs is applicable to Bronchitis.

## **25. Brucellosis**

Must check Lyme Disease in full. Brucella is a co-infection of Lyme always occurring in those cases.

Brucella can be found on its own but it is rather sporadic and running universal frequencies should be sufficient to combat the problem.

## **26. Bursitis**

Refer to Section - Bones and Joints for what should be looked into.

## **27. Cancer**

See Section 14.

## **28. Cataract**

I have no concrete evidence of what causes cataracts but I found one article on the internet once which shocked me as what it was identified as an Eye Fluke -

When I checked my Father-in-Law for this parasite (he had a surgery to remove his cataract several months earlier) this parasite was found with Vega Test.

Obviously I would be looking at checking anything you can find in Section - Eyes.

## **29. Celiac Disease**

Look at Section - Intestines.

### **30. Cerebral Palsy**

This could be a viral infection as well as anything else.

Additionally I would be checking Trichinella!! This parasite has every potential to bring Enterovirus (Polio and others) which can affect mobility in children and in after childhood time.

Morgellons and Nanotechnology is the latest lead I have been exploring with more and more overwhelming results.

### **31. Cervical Issues**

Oncovirus!

Surprise - check for all forms of Paragonimus first

Trichomonas Vaginalis!

All other parasites

All STDs

HPV

Refer to Section on STIs.

### **32. Chagas Disease**

If you suspect you have Chagas Disease you must check for Lyme Disease. Trypanosoma Cruzi which causes Chagas Disease is always part of Lyme similarly to Babesia and Malaria.

You also need to confirm bigger parasites and all other pathogens associated with Heart. See Section - Heart.

Remember - every parasite bring in other smaller pathogens and those linked to that particular organ where the parasite tends to dwell must be accounted for.

Chagas disease is as popular as Lyme disease which obviously explains why so many people have heart diseases. At least 1 in 10 people!

### **33. Chest Pains**

This is all dependant on location in your chest.

Heart is obviously the most important organ in your body. So the focus should be on confirming anything that can be linked to it. Refer to Section - Heart.

For pain in other locations is almost certain to be Paragonimus then Echinococcus or Ascaridae. Dioctophyme Renale can also be places inside the heart muscle as well as the liver.

Look at Sections - Heart and Lungs. Cancer is also to be ruled out.

### **34. Chronic Fatigue Syndrome / M.E.**

Lyme Disease or large parasites need to be investigated - e.g. Diphylobothrium.

Additionally - lungs or lack of oxygen could also be a factor.

Almost any pathogen can make you tired so having the full Vega test for everything would be recommended. Especially if the person is tested the first time.

Additionally check for Diabetes Virus and Sleeping Sickness - Trypanosoma Brucei.

The most important statistic based on Vega Testing is - at least 85% of M.E. diagnosed have Lyme Disease.

### **35. Chronic inflammatory demyelinating polyneuropathy (CIDP)**

This is simply caused by a virus and it may be linked to other neurological diseases or be in a mix with them. You must always check for Lyme and every other neuro viruses.

Nanotechnology and Morgellons should be investigated too. This first diagnosis can later lead to MND. Currently the only lead of finding the cure for MND is nano and Morgellons.

### **36. Chronic Pain**

Depending of source we are looking at dozens of paths to explore.

If muscle - look into Trichinella

If bones - look at Bones and Joints

If Fever is a factor - Lyme Disease

Some parasites - e.g. Echinococcus could be very serious source of pain. Look at testing for all parasites and cancer by default.

Obviously pain is a sign of infection and infections are only caused by external factors unless mechanical damage occurred. Always investigate every possible revenue.

### **37. CJD (Creutzfeldt-Jakob Disease)**

CJD is simply caused by prions. This is a very simple fix. All prions can be removed with Rifing. Please see section on dementia for full list of Prions.

Do not assume this is the only single strain as there could be multiple and beyond what has been confirmed to date.

### **38. CMV**

Please refer to Section - Herpes Virus.

### **39. Coccidiosis**

It is a parasitic infection with a type of a protozoa. Simply run basic universal frequency to address the issue.

### **40. Cold**

Before you think cold check for a flu. The new strains of flu have been engineered to mimic cold. I have seen numerous cases one winter where

over 10 clients reported to have suffered from cold. After simple test flu was in full view!

If your cold is not a flu then you are looking at numerous pathogens - See Section on Lungs for the full list.

#### **41. Constipation**

All as in Section - Intestines.

#### **42. Cough / Chronic Cough**

Look in Section - Lungs.

#### **43. Crohn's Disease**

All parasites - mainly Ascaridae and Intestinal flukes

Noro Virus

Listeria

Leptospirosis

Salmonella

Shigella

HPV

Trichosporon

Candida

Refer to Section - Intestines for more details.

#### **44. Cystic Fibrosis**

Look at Lungs and search through for all pathogens.

It is almost certainly a mix of a toxic mould + Paragonimus + Pneumocystis + Anything that can dwell in Lungs.

#### **45. Cysts**

Depending on where they are Cancer must be first then Echinococcus should be checked for next. Depending on location often Echinococcus could be mistaken for a tumor.

It is difficult to predict any other possibility - so depending on which is diagnose an extra care must be taken when advising on both. In case if Echinococcus is found there could be dozens of cysts located in various places. Mechanical damage caused by Echinococcus can be irreversible.

In case of normal cysts they can be removed with Rife as well s Echinococcus.

In both cases Rifing is the safest method. Pain and needing may occur in due process and the toxicity of Echinococcus could cause a very serious herx.

A close cousin of Echinococcus - Cysticercosis must be checked for and investigated in parallel to E.

#### **46. Deafness And Being Hard Of Hearing**

These is almost certainly a mechanical damage and the most probable culprit is ascaridiae. Focus on this parasite first.

If not found I would be looking at Echinococcus or even more likely its smaller version - Cysiticercosis.

Confirm with Vega if the parasite found in due process is the one present in the head/ears.

#### **47. Dementia**

Look at confirmation of Lyme disease first.

**Prions** and multiple parasites must be checked for.

Check for all neurological viruses: MND, MS, MD, PLS, MG, CIDP.

Nanotechnology and Morgellons can be behind some of the effects too.

#### **48. Dental Issues and Gums (Teeth)**

The gums are almost certain to be affected by *Trichomonas Tenax*. Probably none of the Dentists has ever known this parasite exists!

In terms of teeth you should be checking for:

Syphilis next

Then strongly I would suggest to check for *Acanthocephalan* in case of gums!

And then all that Google can help with.

#### **49. Depression**

LYME DISEASE.

Electronic Harassment and Mind Control - See Chapter on Mind Control.

Someone once on a radio said one thing - Rotten Life Syndrome. Perhaps it is something to look at first before concluding any other root cause.

#### **50. Dermatitis**

Parasites and Fungus.

The starting point is *Acanthocephalan*, *Epidermophyton* and *Trychophyton*.

Then the rest of parasites and Fungus.

Additionally you may have to check for Ectoparasites, *Nocardia*, *Leishmania*, *Chromobacter* and *Trichosporon*.

#### **51. Diabetes**

One of my discoveries has been a confirmation that diabetes is caused by a virus.

There are obviously at least two types of DB Virus as per what we know - Type 1 and Type 2.

Other than the diabetes virus you have to look at Obesity Viruses

and all parasites linked to Pancreases in particular:

Pancreatic Fluke &  
Other major parasites

Possibly diabetes is linked to Nanotechnology alone. Time will show.

## **52. Diverticulosis**

See Section - Intestines for details.

All abdominal or bowel issues are covered in that section.

## **53. Down Syndrome**

Unfortunate and this is my biggest fear there is no link to a pathogen and this is as confirmed by the science linked to genetics.

One possibility is that this is dictated by nanotechnology during pregnancy time...

## **54. Dwarfism**

The latest research with Vega shows this is linked to Prions. Please refer to that Section for more details.

Also - nanotechnology and virus could be associated with the condition.

## **55. Ear Infections and Loss of Hearing**

Parasites - especially round worms must be investigated first. The bigger the parasite the bigger power it has to “drill” into or through the organ.

Then the following should be checked next:

Ascaridiae

Echinococcus

Cystisercosis

and if non is found then the rest of parasites.

Confirm with Vega that the parasites which is found is the one nesting in the ears.

## **56. Eating Disorders**

It is a speculation but the lack of appetite could be caused by Intestinal Infection. Which would almost certain transparent in pain. Always enquire on abdominal symptoms. Then investigate the Section - Intestines.

## **57. EBV**

See Section - Herpes Virus for details.

## **58. Eczema**

Classic Eczema is nothing but the following: Acanthocephalan & Epidermophyton.

Post removal of those tow pathogens other major parasites can manifest as a re-inflamed scars post eczema. More parasite purging may be required.

These are the photos of a skin infected by this parasite before and after:

(Unfortunate for Security Reasons we cannot publish these photos on this occasion - showing some of the Authors work would lead to the name of the Author).

Look also at Section - Skin for other possibilities especially Trichophyton.

### **59. Edema - swelling of tissue**

See Section - Elephantiasis.

Also - if this is linked in any way to Anaphylactic Shock - do look at anything what has been recommended in that section.

Look also at the level of Obesity Virus.

### **60. Elephantiasis**

Check all Filariae group of Nematodes.

When Rifing ensure you run drainage of the lymphatic system from SD card every single day.

### **61. Endometriosis**

All STDs and All Parasites need to be checked.

The focus should be on Trichinella Vaginalis. This parasite is probably never investigated by Medical Authorities. Remember - parasites do not exist in Western Medicine...

All of the STDs and parasites are incredibly serious as they can contribute to infertility and miscarriages.

### **62. Enterovirus and Polio**

These are very serious pathogens. And in this case it is almost certain Trichinella is also involved in due process.

You should also need to check for Enterobacter and Lyme Disease.

### **63. Epilepsy**

Parasites, parasites, parasites - almost certain to be a round worm from Ascaridae family.

The use of cannabis oil in treatment of epilepsy and why it works - imagine if you are under heavy use of drugs or alcohol. You are most likely to be numbed and not in a lot of motion. This is precisely what we do to the parasite - numb it! If it does not wiggle there is no problem.

### **64. Erectile Dysfunction (ED, Impotence)**

Look at Section - STD and Lyme Disease first.

Multiple other factors can be at fault. Anything which can affect your brain can be link to Erectile Dysfunction. Your brain is what controls this organ and all neuro viruses should be considered.

Nanotechnology and Morgellons too.

### **65. Esophagitis**

Look at Section - Stomach. Anything that ends up in the stomach can climb “upstairs”.

A couple of things to suggest are: Helicobacter Pylori and Trypanosoma Cruzi. If the second pathogen has been identified you have to check for Lyme Disease.

### **66. Eyes**

Eyes are the most precious sense you have and obviously the last thing you want to lose. So first thing is first - parasites:

Check for Filariae first in particular Loa Loa and Onchocerca. Guinea worm can also be a fast worker.

All nematodes can punch through an eye ball so do not stop searching at this point.

And if a hole is made by a smaller nematode then bigger things can more easily get in. This is the case with all sorts of wounds in our body. Once the tissue is damaged then that point becomes a perfect nesting place for the next “occupant”.

### **67. Eye Lids (Dropping)**

This is possibly a MG Virus. This could be indication as well that Lyme Disease is forming a part of it.

Nanotechnology and Morgellons too.

### **68. Fatty Liver**

Look in Section - Liver Disease.

Look up at Trichosporon (fungus) and see what it does to your organs.

### **69. Feet**

Feet are mainly affected by Verruca ( See Section - Verrucas) or the following - various fungus, Trichinella, Enterovirus.

For Veruucas - refer to that Section.

For Fungus refer below. The main fungal infections are Trichophyton and Epidermophyton.

The Trichinella can cause a lot of pain to feet. This would be the first parasite to research.

The bones - if painful - then refer to section of Bone Marrow.

## **70. Fifth Disease (Lyme)**

Look At Lyme Disease first. I have no more suggestions.

## **71. Fibromyalgia**

Trichinella is the first most obvious check. And obviously Lyme Disease which brings Rickettsia and Brucella causing major pain to muscle and joints.

Firstly determine if pain is chronic and if affecting the whole body or only isolated parts. Differentiate between muscle and joints only or whether the pain is located in where the internal organs are also located.

If neither Trichinella nor Lyme has been identified, depending on location this could be a very complex issue to be solved. Check for every other parasite there is. Look at cancer next.

The next stage is to complete a full Vega test for anything and everything we may know. If no other findings then I would suggest at testing for chemical substances like mould or other substances which can be inhaled or absorbed through the skin.

Remember - with Vega test you can test for anything you like. So do not think inside the box which this book could become for some of you. Nobody knows everything hence you should be expanding your horizons in all directions.

One other thing to remember is to never believe in what you read in so called scientific news or online. Most of the time in my view things are 180 degree opposite. If I took different approach I would never have made these discoveries.

Look at heavy metals, chemical weapons, Morgellons and anything that can exists in your mind.

## **72. Food Poisoning**

There are obviously chemical substances to be considered in the equation. This can only be eliminated through or by NHS. If you suspect someone digested a chemical then have no hesitation to go to A&E.

Obviously with Vega test you can confirm if a chemical substance is involved. You can also verify which one it is.

If the chemical substance is not involved then the search for these:

- Hafnia,
- Clostridium
- Salmonella
- Shigiella,
- Salmonella
- Rota Vrius,
- Leptospirosis,
- Listeria,
- Noro Virus,

Do not forget to investigate parasites - e.g. Echinococcus. And every other on the list.

You can also refer to Section - Intestines.

### **73. Flu**

One of my latest discoveries is, and I wrote about it in the Section about Cold - is that the new strains of Flu mimic the cold. So if anybody complains about cold - do check for flu first. And do not be surprised to find it.

This is another method of Big Pharma to disguise existing diseases by mutating then so they appear to be something else.

### **74. Fungal Infections**

This section is very broad and has to be referred to different body parts.

So - here is my knowledge:

Do you think Candida is bad? Well - look at Trichosporon. The yeast infections associated to Candida are often confused with Trichosporon. Vaginal fungus is almost certain to be Trichosporon as well as white tongue.

For lungs and toxic mould refer to Section - Lungs.

For feet or skin - also refer to those specific sections.

For plain Candida - use universal frequency from Partner II.

#### **75. Gallbladder**

The first and only thing to check is the Gallbladder fluke. The please refer to Section - Liver.

Check all the remaining parasites and Fasciolopsis Flukes in particular.

#### **76. Gangrene / NFNecrotizing fasciitis**

This are very serious and very fast working infections.

One of the pathogens could be MRSA.

Personally I would not waste a minute and run the most advanced universal frequency on Partner II.

#### **77. Gastroenteritis (Stomach Flu)**

Refer to Section - Food Poisoning and check for all pathogens listed in that Section.

What you think may be a flu can turn out to be something a lot more serious like cancer or Echinococcus.

#### **78. Genital Warts in Men (HPV Virus)**

Allegedly Genital Warts in Men (as any warts) are caused by Papilloma Virus so check for it first. Look at Section - Skin for more guidance in case if eliminating HPV does not resolve the issue.

Other things are Mites or Nanotechnology and Morgellons.

### **79. GERD (Gastro Oesophageal Reflux Disease)**

Refer to Section - Stomach.

Additionally - check for Lyme and Trypanosoma Cruzi can affect this organ.

### **80. Gonorrhoea**

Refer to Section - STDs for guidance.

### **81. Graves' Disease (check for Lyme)**

Lyme Disease seems like the starting point. Then Herpes Viruses.

Other than these two this field has not been covered by my research.

There are no such things in my view as autoimmune diseases so whatever causes it should be destroyed with one of most advanced frequencies from this book or the Book web site.

### **82. Growth Hormone Deficiency**

There has to be a very specific virus causing this condition.

Apply universal frequency - the most advanced should be used to attempt nanotechnology and Morgellons.

### **83. Guinea Worm Disease**

Guinea Worm Disease is a very simple fix. GW also causes Verrucas.

They can be very small in cold climate and they do exist in every place on this planet!

#### **84. Gum Disease**

Begin with Trichomonas Tenax - this is the root cause of gum disease.

However - if problem is not resolved please refer to Section - Teeth.

Sadly - most if any of the dentist has never heard about this parasite and they continue being stupid in front of a very large and very substantial pathogen. But since there is no cure for it you might as well pretend it does not exist.

#### **85. Haemorrhagic Viruses**

Please refer to the Main Section - Lyme Disease on details on all VHF's.

VHF's is one of the most serious of infections! These family of viruses is classified in my top 5 or 7 items in terms of severity.

They do exist and their milder strains can be in as many as 1 in 2 humans!

You must always check with Vega Testing every single person for this family of viruses.

#### **86. Hay Fever**

Parasites, Parasites and again Parasites. The focus should be on Tapeworms.

#### **87. Head**

Where do we begin????? Make sure cancer is not in the mix! Always with every initial check. Head is no different - even more important than any other organ.

First thing is first - the big parasites must be looked into next. The main suspects are Echinococcus and then all Ascaridae. Look into flukes as they love nice and soft tissue with endless food supply.

Then obviously Lyme Disease comes next in particular Coxiella Burnetti. This particular pathogen is what causes most Migraines.

If headaches persist you need to run full Vega test.

Concentrate on the remaining parasites and then look at Prions, Nanotechnology, Fungus, other parasites and Morgellons.

## **88. Headaches**

Huge majority of migraines are caused by Coxiella Burnetti. CB is a coinfection of Lyme Disease which means if you confirm this infection you are guaranteed to be looking at the whole Lyme Complex.

For more details look in Section - Head (next above)

## **89. Heart / Heart Diseases**

Parasites!!! - remember about external parasites - e.g. flukes! Lyme Disease and Coxiella and Trypanosoma Cruzi in particular

## **90. Hepatitis**

If Hepatitis has been identified always check in addition for HIV and all other Retroviruses.

The obvious group of parasites are Liver Flukes but do not stop here.

## **91. Herpes Viruses**

Herpes Virus make you very tired. They are allegedly cancer contributors.

These are rather a simple fix with Rife and universal frequencies.

## **92. Herxheimer-Jarsich Reaction**

Look at the Chapter XIV in this book for all details on Herx. Herx can kill and it is important to understand what it is and the similarity with Sepsis before you start Rifing.

## **93. HHV-6/7/8 (Human Herpes Virus Type 6/7/8)**

See Section - Herpes Viruses for all frequencies. More type of Herpes may exist.

## **94. HIV / AIDS & other Retro Viruses**

HIV can be a very complex disease. And I would almost certainly involve many other Retro Viruses.

I would be betting that Lyme disease is also at the core of the problem and some very nasty parasites which affect the immune system with incredible vengeance.

## **95. Hips**

Look at Section - Bones.

## **96. Homosexuality**

One of the hypothesis is nanotechnology which with its software controls our human behaving. Perhaps this is one additional method of having our numbers reduced on this planet.

Perhaps one day we can find out once the first few cases are put through full zapping process of eliminating the foreign agents dwelling or been installed inside us.

## **97. HPV Virus - Human Papilloma Virus**

It appears every girl is scared to death to have it as they say it leads to cervical or throat cancer.

And the two are linked together well through oral sexual contact. This is why the two locations can be highly affected by this virus.

## **98. Huntington's Disease**

My view is that all so called genetic mutations and genes are caused by either a viral and often congenital infection or by nanotechnology.

A lot of money must be placed on Lyme disease as Huntington's disease symptoms manifest itself is similar way. If we combine the root cause of ALS/MND then these elements are what leads to this cruel disease.

## **99. Infertility**

Infertility is mainly caused by STDs. So please refer to that section.

One other thing to add is - if a woman is negative with every pathogen then the partner has to be checked for Rubella Virus. Rubella makes men infertile but not women.

## **100. Inflammatory Bowel Disease (IBS / IBD)**

Look in Section - Intestines to cover the topic.

Two main things to check - Intestinal flukes as well as Ascarididae. And both can be living in the same space.

## **101. Intellectual Disabilities**

Lyme / Morgellons / Prions / VHF's / Parasites / Nanotechnology

## 102. Intestines - All

First thing is first - parasites are the main trouble maker.

Look at the body shape of a person and that will often tell you what to look into:

If you see massive belly then first thing to check for are tapeworms.

If you see a thin and wrinkled person then you look at Ascarididae.

If IBS is reported then intestinal flukes will be almost certainly there.

And the long list of viral and bacterial infections as well as fungal.

The list is not short:

Salmonella

Shigella

Campylobacter

Yersinia

E. Coli

Vibrio Cholerae

Listeria

Leptospirosis

Clostridium

Cryptosporidium

Rota Virus

Noro Virus

Entero Virus

Entamoeba Holiistica

Giardia Lamblia

Candida

Trichosporon

And all other parasites of any kind!

### **103. Itching Anal (Anal Itching)**

The itching bum is most of the time the sign of Ascaridiae or similar nematodes.

However - before you start checking for those look at Blastohominis. This is something I suffered with for 15 years only to discover that after eliminating this protozoa all symptoms disappears.

Also - small children - when having red bum - this can also mean Blastohominis.

### **104. Jaundice**

Jaundice is a sign of ongoing issue / damage to the liver. This almost certainly means Fasciolopsis Hepatica/Magna/Gigantica as well as Hepatitis and HIV. Refer to Section - Liver for full list of pathogens to be checked.

### **105. Jock Itch**

Look at parasites first before looking at Fungus.

Then the next item to check is obviously Epidermophyton.

If these two do not solve the problem then be more specific in checking the remaining of the fungus. All parasites and fungus must go before searching in other groups of pathogens.

Morgellons need to be included.

### **106. Joints**

The first thing to look at are parasites and Lyme Disease.

Depending on which joints are affected then you may be looking at different scenarios - e.g. if knees are the biggest problem then it is almost certain that this problem is caused by Rickettsiae. Which means Lyme disease.

The next step is to look at all of STDs. Yes - STDs cause serious joint issues.

The final step is to look at simple things like Streptococcus, Yersinia and all other pathogen you can think of. Almost every pathogen can have an impact on joints. So run full Vega test if this is your first involvement with such person.

The above is just a tip of the iceberg. We then need to confirm heavy metals, nerve agents, silicone and other common toxins and then Morgellons and Nanotechnology.

### **107. Keratitis (Red Eyes)**

This is highly probably linked to one or several Filariae. The problem with any wound is - once a whole is made by one Filariae (in this case at the back of the eye ball) then even after elimination of the prime parasite other Filariae can use the same (or I should say the old) access point to make an attempt to re-enter.

This can continue for many months until all type of Filariae are purged. Additionally, any other Nematode can pose the same threat. So when it comes to saving eyes this can be a very lengthy process to come.

Simply - you have to keep going. For other pathogens - please refer to Section - Eyes.

### **108. Kidney Disease**

Diectophymae - all group!!!! This is your number one parasite which can destroy this very important organ.

And like with heart of liver you have to consider parasites which can be attached on the outside like Botulus Microporus.

Trypanosoma Cruzi can also be a very serious threat.

With Kidneys the pool of pathogens is almost endless, so my recommendation is to complete full Vega Test for everything you have

the knowledge on. Kidneys are a filter in your body and anything can be found in this organ.

### **109. Knees**

If mainly knees are the joint affected in any person then this would suggest it is caused by Rickettsiae. Which obviously means Lyme Disease and many other pathogens. So - do confirm it first. Then refer to Section - Joints if Lyme negative for all of the remaining checks to be made.

Other agents non organic can also play a major part in affecting joints and knees.

### **110. Lactose Intolerance**

Check for Parasite, Parasites and again Parasites. This is almost certainly caused by Parasites and all other intestinal pathogens.

For more direction refer to Section - Intestines.

### **111. Laryngitis**

If you were to refer to NHS Guidance then I would say check for Streptococcus, etc.

But I like to look deeper - e.g. anything big first.

My search would involve all that belongs to Lungs (See section on Lungs) and all on Head.

Parasites like Echinococcus or any other fluke or nematode can find that place very comfortable.

And do not forget Pentastomida. This parasite is more than common.

### **112. Leishmaniasis**

This is often part of Lyme Complex and Morgellons. What you always have to consider in parallel with this nasty protozoa is:

Acanthocephalan  
Epidermophyton  
Nocardia  
Chromobacterium  
Guinea Worm  
Skin Ectoparasites - e.g. Myasis

For more refer to Section - Skin.

### **113. Learning Disability**

The starting point is Lyme disease. It can reduce the cognitive skills down to nothing.

Other viral infections, parasites can make anybody irritable which naturally make learning difficult.

Prions should be at the base of it too.

### **114. Legionnaires Disease (Legionnaire Disease and Pontiac Fever)**

This is obviously caused by Legionella. All frequencies for this disease at the back of the book.

However - when contracted this bacteria you have to consider other pathogens - e.g. all parasites and all linked to Intestines. See for more in that Section.

Naegleria Fowleri could be also in the mix! The room for other pathogens to assist with this infection is endless. You must not stop on searching just for this pathogen. A full Vega should be done.

### **115. Leprosy**

Leprosy is caused by Mycobacterium Leprae. Universal frequencies for this condition should be used to provide higher level of confidence in

tackling all possible pathogens. This condition could be as complex as Lyme and trying to attack only one strain of what could be many different cousins would be a high risk approach.

You also need to check all pathogens linked to skin and also other strains of Mycobacterium.

Nano and Morgellons can be the cause too.

### **116. Leptospirosis**

For details on Leptospirosis refer to Section - Intestines.

Consider all other Parasites at first.

### **117. Leukaemia**

Leukaemia is a form of malignant Cancer and it can be very fast in acting.

Since it is directly link to bone marrow you need to look at Cancer and Bone Marrow Sections. Obviously eliminating Cancer Virus is the starting point. Preventing the spread is the key.

Then look at all forms of Meningonema and then Bone Virus - these I think are the key elements to destroy first.

### **118. Listeria**

For details on Listeria refer to Section - Intestines.

Nasty infection and it could be lethal.

### **119. Liver & Liver Disease**

Strongly there is not too much to say on liver other than this is one of the organs with no nerves system. This obviously means that when something goes wrong inside the liver it is often too late to help

someone because pain will only manifest itself once things spread to other parts of the body. Which basically means the liver is in a very bad condition and it may be too late for it.

The problems with Liver would be addressed in great distance by checking for:

Fasciolopsis Hepatica / Magna / Gigantica  
Botulus Microsporium  
Dioctophyme Renale

HIV  
Hepatitis  
VHFs

## 120. Lungs

Lungs like liver have no nervous system. Hence when things have gone wrong it is too late when they get detected.

Big things first - Echinococcus, Paragonimus, Ascaridae  
Pentastomidae  
Pneumocystis  
Toxic Moulds  
Mycobacterium  
RSV  
Chlamydia Pneumoniae  
Klebsiella  
Coxiella (Lyme Disease)  
Cryptococcus

The main thing probably to mention is Pneumocystis. This parasite is almost certainly to be the cause of most if not all cases of asthma.

You need to look into Nano technology and Morgellons too.

## 121. Lupus

In my view there are no such things as autoimmune conditions. There is always an external agent causing the problem. Our bodies are not designed and have no software permitting this behaving.

This should be similar to all other skin conditions.

Focus on Acanthocephalan and on Epidermophyton

Then simply search the rest of parasites and fungus if these two are not found.

My other advise would be Trychophyton and Ascaridia.

Almost anything could be at source of the skin problems.

Refer to section on Skin conditions.

## **122. Lymphedema**

Filariae!!!! Simply look at that section and if this fails then search for blood flukes and all other nematodes.

## **123. Lymphoma Hodgkins (Hodgkins Disease)**

Blood cancer - there is simply the oncovirus to be eliminated and then the blood fluke.

Research for Lyme as if found it is compromising the immune system and all of Lyme Complex coinfections.

## **124. Mad Cow Disease**

Mad Cow Disease is caused by Prions. We are fed with Prions (softer versions of mad cow disease) in raw or undercooked meat - e.g. medium steak.

Almost every piece of meat can be contaminated and if undercooked it will become a residue inside our body. Therefore it is important to cook meet thoroughly and do not eat unpasteurised dairy.

Simply refer to Section - Prions for more details.

### **125. Malaria**

Refer to Section - Lyme Disease for all details on Malaria. Additional check may be needed or research into additional strains of Malaria but the table in Lyme Section will point you in the direction of what range to research.

### **126. Melanoma (Malignant)**

Refer to Cancer Section (or Cancer Prevention)

Additionally you need to confirm HPV, Candida and Acanthocephalan - the skin pathogens.

Obviously the starting point is the Cancer Virus!

### **127. Mental Health / Illness**

**LYME DISEASE!!!**

I'm not sure what else to advise - 5G and the frequencies they transit can be also part of this scheme. Any feeling can be converted into frequency. Now - you can imagine if you are surrounded with 5G, WiFi and other gadgets you can be easily targeted with invisible frequencies designed to make you anxious, depressed, demotivated, aggressive.

### **128. Meningitis**

This is possibly more serious than anything!!!! And there is very little time to be wasted!!! Meningitis can kill and can cause disability!!!!

One of two things to always confirm if high fever has developed is the Pneumonia and Meningitis. Always check for both. It is not impossible to develop both conditions in parallel.

Now - with Meningitis the list is so long you have to use kinesiology to determine which type of pathogen plays the role and at which level - e.g. D1 or D2 or D3.

Only the one which is at the highest level is most certainly at the core of the problem.

This is the list of pathogens and be mindful this is possible not fully comprehensive. Remember - Meningitis can be caused by bacteria, viruses, parasites, fungus and nano technology. The list is very, very long.

So if none of these is above D6 then you need to continue searching for more:

Viral Haemorrhaging Fever

Lyme Complex

Check every pathogen with kinesiology. Request body to respond to questions. This is the fastest way to pin point the current pathogen. Almost any pathogen can cause Meningitis.

Remember there may be a pathogen which is not in the menu and you may miss it out. The suggestion is to start universal frequencies asap.

This are other less significant pathogens:

Neisseria

Streptococcus

Cryptococcus

Haemophilus Influenza

Listeria

Herpes

HIV

Mycobacterium

and many, many more

If in doubt apply the the most advanced universal frequency and do not stop for a minute. Unless a severe herxing occurs.

## 129. Migraines

Huge majority of migraines are caused by Coxiella Burnetti. CB is a coinfection of Lyme Disease which means if you confirm this infection you are guaranteed to be looking at the whole Lyme Complex.

The second time on the list to check is Echonococcus and Cysticercosis.

### **130. MMR**

Simple viruses - just use 7831.42Hz

### **131. Mould**

All mould can be eliminated with universal frequency - 7831.42Hz.

### **132. Mononucleosis & Herpes Viruses**

See - Herpes Viruses

### **133. Morgellons**

Whatever it is it is not man made. And finding the cure for Morgellons will bring the cure to all diseases.

Morgellons is not just simply fibres or whatever you have read about it.

Morgellons is simply a nano technology. Highly sophisticated and programmable substance which can be made to act as anything - you can design it to turn into cancer or similar. It is "plugged" into your DNA (which is unique) and can be steered from the central computer which defines what will be your fait.

Simply look at the sky each day and watch what is happening at the high altitude.

Whatever is sprayed above us it is then inhaled and whatever is this substance it can replicate itself and the assimilate itself within our bodies.

It is evil and whatever it is it will bring MND/ALS as a global pandemic. This will be a preparation for something much greater and more evil than we have ever seen in the history of humanity.

MND and Morgellons in my view it is the same thing. We all have Morgellons - no exceptions!

#### **134. Motor Neuron Disease**

MND is possibly the most horrific disease you can develop. And I personally developed early symptoms of MND hence the answers below. This was one of the scariest day in my life.

MND is caused by a Virus - at least that is what Vega has shown. The full list of frequencies below:

#### **135. Multiple Sclerosis**

MS is caused by a Virus - at least that is what Vega has shown. This is also how my sensation in my hands and legs fully returned after eliminating this virus.

The full list of frequencies below:

#### **136. Muscular Dystrophy**

MD is caused by a Virus - at least that is what Vega has shown. The full list of frequencies below:

#### **137. Muscle Pain**

Trichinella and Lyme (Brucella)

#### **138. Myasthenia Gravis**

MG is caused by a Virus - at least that is what Vega has shown. The full list of frequencies below:

Apply universal numbers.

**139. Myocarditis**

Look at Dioctophymae first!!!!!!!!!! This is the most horrific parasite when it comes to blood circulation system.

For more details look in Section - Heart.

**140. Naegleria Fowleri**

Simple and yet a very dangerous protozoa possibly implicated in MND and other neurological conditions.

Apply the most advanced universal frequency to deal with the problem.

**141. Narcolepsy - Sleeping Disorder**

Trypanosome Rodiniese.

**142. Nausea and Vomiting**

Check for Echinococcus first - this is the classic parasite inducing vomiting.

Then look at the full list of pathogen in Section - Intestines.

**143. Neck Pain**

The neck pain can be simply a biproduct of problems with heart or Lyme disease. The neck pain is a classic indication you may have Lyme. So check for Lyme first.

If no Lyme is detected then focus on Heart. This is probably a very serious problem with your heart by then and advanced chronic stage.

For more details refer to Section - Heart.

#### **144. Necrotising Fasciitis (NF)**

There is no time to be waster to investigate on what pathogen causes the problem. Simply run the most advanced universal frequency and do not stop for a minute.

#### **145. Norovirus**

Noro virus means parasites and other co-infections. Please see Section - Intestines and check all as found in there..

Simply use one of the universal frequencies if you have the confidence that you are 100% affected by this virus alone. This never happens though!

#### **146. Obesity**

Fish Tapeworms  
Other Tapeworms  
Obesity Viruses

And must remember to eliminate the Diabetes Virus.

#### **147. Obsessive Compulsive Disorder (OCD)**

Check for Lyme First.

Then Nanotechnology would be my second and final guess.

**The research continues.**

#### **148. Onchocerciasis**

Onchocerciasis may turn out to be a lot more complex than we think. Onchocerca does not work very fast - often years or decades are required.

In case of the loss of vision is a lot faster you must check for all filarial and Ascarididae. Also the Eye fluke - ...

**149. Onychomycosis (Fungal Nails)**

Trichophyton - this is the starting point.

Then if this does not resolve the problem then all the rest of Fungus.

**150. Osteoarthritis**

Refer to Section on Bones and/or Joints for more details.

**151. Osteomyelitis**

Refer to Section on Bones for more details.

**152. Osteoporosis**

Practically the same as Paget's disease.

Refer to Section - Bones for all the details.

**153. Ovarian Cysts**

This is just as common as anything. And very easy to eliminate. Apply common frequency for Cysts or the one for Cancer.

**154. Paget's Disease**

Check for Oncovirus  
Meningonema Peruzzii

## Bone Virus

Meningonema Peruzzi is a parasite which loves to set nests inside bone marrow which later lead to permanent and often irreversible damage.

### 155. Parkinson Disease

This is almost certainly caused by Lyme Disease.

Also Nanotechnology could be the ultimate agent.

### 156. Pertussis

Caused by Bordetella Pertussis - commonly called as a whooping cough. Also very contagious.

This is a simple fix if Bordetella is found on its own. But if delivered by Pneumocysts then the search should be broadened. Do not rely eliminating Whooping Cough will solve the problem in full.

Always good practice to check all pathogens from Section - Lungs.

### 157. Pneumonia

Pneumonia is a very serious condition to deal with and you should never rely on dealing with this without involvement of NHS. Taking such approach can put at risk the person developing the condition. However - if you leave it all to NHS you become a gambler. I would never allow anybody from NHS to crack on with their guess work.

Check marker pneumonia first to confirm. Check for Meningitis as well. Consider proper medical advice.

Pneumocysts!!!!!!!!!! - first thing to check.

Ascaridiae, Echinococcus, Paragonimus

Toxic Mould: Histoplasma Capsulatum (histoplasmosis), Coccidioides Immitis (Coccidioidomycosis), Blastomyces Dermatitidis (Blastomycosis), Paracoccidioides Braziliensis (Paracoccidioidomycosis)

RSV

Mycobacterium Species  
Chlamydia Pneumonia  
Chlamydia Species  
Streptococcus Pneumonia  
Streptococcus Species  
Haemophilus Influenza  
Staphylococcus Aureus  
Staphylococcus Species  
Neisseria Species  
Mycoplasma Species  
Legionella Species  
Coxiella  
Serratia  
Proteus  
Peptostreptococcus  
Bacillus Anthracis  
Nocardia  
Anticomycetes  
Moraxella  
Escherichia Coli  
Burkholderia  
Yersinia  
Tularemia  
Bordetella  
Porphyromonas  
Fusobacterium  
Prevotella

### **158. Primary lateral sclerosis (PLS)**

It is a viral infection. Frequencies can be found at the back.

However - this virus almost always guarantees to come with other neuro viruses e.g. CIDP. And Lyme Disease must be eliminated as well.

Look at Meningonema Peruzzii as a parasitic infection assisting with PLS.

### **159. Polio**

See - Enterovirus or simply apply the most advanced universal frequency.

### **160. Polycystic Ovary Syndrome (PCOS)**

Refer to Section on STDs and Endometriosis. These problems are highly likely linked to the same group of agents/pathogens.

### **161. Prostate**

Refer to Section on STDs. These problems are highly likely linked to the same group of agents/pathogens.

### **162. Psoriasis**

This is something I had and once the large parasites are removed the problem tends to go. So searching larger beasts is the first recommended step.

Then later it is likely for Nanotechnology to take over.

### **163. Rheumatoid Arthritis (RA)**

Refer to Section on Joints for more details.

### **164. Rash**

Again - like any skin problem the first thing is to confirm and eliminate large parasites. Some fungus infection especially Epidermophyton or Trichophyton may be involved.

Then if problem returns it is almost certainly the Nanotechnology.

### **165. Rectal Bleeding**

All things start with parasites and the star of this show is Balantidium Coli.

The next thing to look at is:  
Entamoeba Histolytica  
Blastohominis

And then my later discovery and the most astonishing:

Westonius Westsoni Fluke

Obviously checks have to be made for almost all of the remaining pathogens from Section - Intestins. Running full Vega would be advisory as well.

Bleeding is a serious issue and Cancer checks must be made as well.

### **166. Respiratory Syncytial Virus (RSV)**

The frequency for RSV can be found at the back of the book.

If identified this almost certainly means bigger things. You have to check for full spectrum of all pathogens found in Section - Lungs.

### **167. Ringworm**

Allegedly this condition is caused by fungus.

Regardless what Big Pharma says always start from investigating parasite.

I have no clear suggestion where to begin. Anything associated with Morgellons should be covered in the search.

### **168. Rocky Mountain Spotted Fever (RMSF)**

This condition is caused by Rickettsia. You need to cover all strains of these bacteria regardless of what the official diagnosis.

This almost certainly means Lyme Disease.

### **169. Rotavirus**

Rotavirus is associated with diarrhoea. If found - research all pathogens associated with Section - Intestines.

### **170. Salmonella Food Poison**

Salmonella is associated with food poison. It can also transparent itself as bloating and diarrhoea. If found you have to cover all of the Section - Intestines.

### **171. Scleroderma**

Autoimmune Disease - Skin related. Obviously I have already explain that I believe there are no such thing as autoimmune disease.

In this case my suggestion is to look at Lyme and some major parasites as a mix.

Refer to Sections on Autoimmune Diseases and Skin for more details and clues.

### **172. Scoliosis**

Please Refer to Section on Bones and Joints for more details.

### **173. Sepsis**

Refer to Section on Herxheimer-Jarsich Reaction - Chapter XIV.

Sepsis is incredibly serious. However - if you develop Herx you may be killed by antibiotic if diagnosed with Sepsis.

Being in this situation is like playing Russian Roulette.

Vega Test would be the right tool to confirm which way to go with treatment. In any way - using Rife is by far the safest method of reducing infection.

#### **174. Sexually Transmitted Diseases (STD)**

See Section on STDs.

#### **175. Shigella**

Just another bacteria. You can find its individual strains in the next Section in great detail.

Simply use universal frequencies to combat the infection. Be mindful - these pathogens often come in pairs with other nasty viruses often hidden inside.

#### **176. Shingles (Herpes Zoster)**

Refer to Section on Herpes Viruses.

#### **177. Sickle Cell Anaemia**

Inherited Blood Disorder...

Please refer to Section on Blood or other similar conditions for details on pathogens that may be involved in the condition.

Schistosome, HIV, Malaria would be a good starting point.

#### **178. Sinusitis**

First thing is first - parasites!

Roundworms and Pentastomida would be the first check. Then you should look at Echinococcus and Cysticercosis.

The chance of finding the culprit is almost like trying to find a needle in the stack of hay. Simply Rife with universal frequencies.

### **179. Sleep Apnea**

Lyme Disease

and

Trypanosome Brucei and Gambiense

### **180. Snoring**

Look into Pentastomida and all parasites which may affect lungs and throat or larynx. I have no clear picture as what it could be but parasites would be my field of research first.

### **181. Speech And Language Disorders**

Again - Lyme Disease or what I think could be the Autism Virus.

### **182. Spinal Bifida**

This is a pure speculation - imagine one of large worms affecting the fetus during development.

My suggestion would be to look at the section - Spinal Cord Injuries, Joints and Bones.

### **183. Spinal Cord Injury**

Most spinal cord injuries or spinal injuries are associated with mechanical injury. As a matter of fact this is what we are fed with by Big Pharma.

There are hundreds of small pathogens - mainly bacteria - eating in to the bone tissue, weakening the bone structure. What happens next is a simple mechanism. A bone which is affected by parasites and pathogens

is more prone to suffer structural damage than healthy one. The same is applicable to the discs and its tissue.

So look at Sections - Joints and Bones for all details on what to consider first.

Never ever trust in your first diagnosis and always confirm those invisible causes.

This process works in the opposite direction as well - a damaged tissue is a gate way for other pathogens to attack. So never expect to find one pathogen. They are often in large bundles.

#### **184. Spleen Enlargement**

Parasites, Parasites, Parasites.

You should start with Macraconthius H., then all Ascaridae and tapeworms. You are obviously looking at sizable parasite and these two groups should be the top of the search. I would have nothing else to recommend to research.

#### **185. STDs**

The STDs can lead to Infertility, Endometriosis, Erectile Dysfunction, Miscarriages and Cancer. Practically every person has one or more STD pathogens. And SDTs are contracted not necessary through unprotected sex, but like with anything these infections are congenital.

Almost all infections can be congenital. So checking for STDs every person (especially younger individuals) should be a standard procedure.

These are what should be done as minimum:

HIV  
Syphilis  
Chlamydia Trachomatis  
HPV  
Neisseria Gonorrhoea

Trichomonas Vaginalis !!!!! the worst of all and really mentioned - and a parasite!

Genital Warts / Herpes

Molluscum Contagiosum

Hepatitis Type B

Mycoplasma Genitalium

Ureaplasma

Public Lice

Scabies

Shigiella

Chancroid / Hemophilus Ducreyi

Zika Virus

Honestly - practically almost any bacteria and/or virus can be transmitted through sexual means.

These are just what Big Pharma tells us causes physical problems and discomfort.

But the most horrific of all of them is Lyme Disease. Unfortunate for ladies this STD is mainly passed in one direction only.

## **186. Stomach**

The starting point are obviously the parasites.

The next item to confirm is the Helicobacter Pylori.

Then the next and least expected is a little protozoa known as Chagas Disease. This parasite is called Trypanosome Cruzi

Then look at the intestinal bacteria and viruses.

Simply run through the list associated with Section - Intestines.

## **187. Stroke**

What is a stroke? In my view it is a blockage with some form of debris or a physical pathogen large enough to clog something up under the skull.

So the starting point would be to explore Schistosoma and Capilarias. Anything which is applicable with Varicose Veins and Veruukas.

All forms of Filariae should be considered.

If this is simply non-living object then unfortunate only surgery may be an option.

What we may be able to develop in future is to confirm frequencies for those Proteins or other organic stuff which is linked to Stroke and destroy them with Rife. Currently this is only a theory...

### **188. Stye (Eye)**

Look at Eyes Section.

### **189. Suicide (Thoughts)**

This is almost certain to be linked to Lyme Disease. I had such thoughts and when interviewing Lyme cases this is often consider by large percentage of Lyme people.

Another thing is to consider electronic surveillance and microwave weapons. See the whole chapter allocated for this very new and very interesting topic. And this is not a joke. There are tens of thousands of people targeted with use of this technology especially those difficult individuals who are not in line with the system.

Nanotechnology and electronic harassment could be heavily involved.

### **190. Sweating (Odour)**

The pungent odour of swear is almost certain to be contributed to Streptococcus Aureus.

### **191. Teeth**

For Gums - refer to such Section.

For problems with teeth we need to cover the following:

Actinobacillus Actinomycetemcomitans  
Porphyromonas Gingivitis  
Prevotella Intermedia  
Bacteroides Forsythias  
Campylobacter Rectus  
Eubacterium Rpecies  
Fusobacterium Nucleatum  
Eikenella Corrodes  
Peptostreptococcus Micros  
Syphilis

and many, many more.

Do not forget to check for Trichomonas Tenax!

## **192. Tetanus**

When looking at Tetanus you have to look and verify the full range of Clostridium. But you must never stop at treating Tetanus. You have to look at everything associated with Section - Intestines. Remember - small things are often delivered by large parasites...

The full table of Clostridium in the Next Section.

## **193. Throat**

Phlegm is often the sign of the following:

- Either Lyme Disease
- Serious Parasites

For this symptoms my recommendation would be to check for all pathogens as found in Lungs sections.

Additionally I would suggest exploring what would be very unusual finding: (see web for a name)

If the throat is simply painful this is most likely an infection with Streptococcus as what you can find on NHS web site.

If fever assists the throat pain then you may be looking at the Flu. Yes - the new strains of flu can mimic or assist with throat infections. Refer to section for Flu then.

### **195. Thyroid Disease**

I must admit - I have little knowledge on the subject. Allegedly Hepres Viruses are involved so this would be probably the starting point.

However - like with diabetes it could be anything or just as direct as nanotechnology.

### **196. Tongue**

Look at Trichosporon first. Then all sorts of candida and other fungus.

There are parasites which can live in the tongue muscle and many more little creatures. Simply run the universal frequencies for all.

### **197. Tourette Syndrome**

Lyme (Ticks) Nervous System - Check For Viral and For All Neuro Viruses.

Nanotechnology is also very probable as a direct cause.

### **198. Toxoplasmosis**

It is just a simple parasite and easy to remove.

Use the most advanced universal frequency from the book or the Book web site.

### **199. Trichinosis**

Trichinosis is probably the second most dangerous parasite. It comes with enormous amount of pain and is in 99% of cases diagnosed as Fibromyalgia. And more than that - there are only 8 species known to us but I managed to identify additional three - one of them incredibly vicious.

Use the most advanced universal frequency ASAP.

## **200. Trichomoniasis**

Trichomonas Tenax - See Gum Disease

Trichomonas Hominis - Intestines

Trichomonas Vaginalis - STDs

## **201. Tuberculosis**

You must check for all that is shown in Lungs section. Mycobacterium is often carried by Paragonimus and other parasites - e.g. Echinococcus and Ascaridiae.

## **202. Tularemia**

Always check to Lyme Disease. Tularemia is rarely found on its own. It practically guarantees Lyme Complex.

And simply hope it's just Tularemia because the fix should be as simple as applying one of the universal frequencies.

## **203. Tumour**

What is a tumour???

One thing must be checked first - confirm with the marker for tumour. If positive you need to complete all cancer investigation.

If negative for cancer but you were explained you have an object tumour-like - the search is very simple - Echinococcus.

#### **204. Typhus**

See frequencies for Rickettsiae.

You must also check for Lyme Disease.

#### **205. Turner Syndrome (Dwarfism)**

It must be caused by Nanotechnology - pending investigation.

#### **206. Ulcerative Colitis - Inflammatory Bowel Disease**

Parasites, parasites, parasites!!!!!!!

Lets start with intestinal flukes.

Then look into roundworms - in particular Ascaris types. It is not uncommon for them to coexist in the same space.

Then the remaining of the intestinal pathogens.

#### **207. Ulcers (Mouth)**

Ancylostoma Brasiliensis. Eating raw pineapples without washing them allows Ancylostoma to prick through the skin and you end up with ulcers inside your mouth.

Obviously checking for other types of Ancylostoma is a wise thing to do as well as washing raw exotic fruit prior to peeling or blitzing.

#### **208. Urinary Tract Infection**

You may not believe it but Paragonium is my first recommendation.

Then you should check all nematodes and Bladder Fluke.

Then all bacterias involved in the bladder infection - See Bladder section.

#### **209. Usher Syndrome - loss of vision and hearing**

Echinococcus is the most serious parasite. Having a cysts or cysts developing inside the skull almost certain can develop this sort of symptoms.

## **210. Vaginal Infections**

Look at:

Trichomonas

Paragonimus

Look at STD section

Trichosporon

To Be Further Investigated.

## **211. Varicose Veins**

All small and larger parasites living in the blood stream or those that can affect organs internally:

Capillarias (Blood Filaria)

Schistosomas (Blood Flukes)

Other smaller nematodes

## **212. Verruca's**

Verrucas are caused by a cousin of Guinea Worm. Identical frequencies are to be used to eliminate the parasite.

## **213. Vitiligo**

Vitiligo is most likely caused by Tularemia. This also almost certainly means Lyme Disease.

Vitiligo is one of the methods to recognise if someone has Lyme Disease.

## **214. Vomiting**

**First thing to check is Echinococcus!!! The most horrific of all parasites!**

This is often the signature symptom of this most serious of all parasites.

Then check the following - See Section - Nausea and Vomiting.

### **215. Warts**

If the truth is warts are caused by HPV then that is all you have to get on with. Unfortunate as at this stage I have no concrete evidence that Warts are not caused by another pathogen(s).

### **216. Weils disease (Leptospirosis)**

See Leptospirosis section.

### **217. Williams Syndrome**

Look into Lyme and Parasites.

### **218. Wrinkles**

Human Round Worms - the Ascaridiae deprave human body of all nutrients. Hence the skin becomes starved off and the wrinkles develop.

Every time I see a young and slim person with wrinkles you can be almost certain to find large quantity of Ascaridiae.

Besnotia - see what it does to cattle. Are we different from animals???? No. Those with aging skin have always this pathogen.

Apply the most advanced frequency to prevent further raging and perhaps even to see some improvement/reversal.

### **219. Yeast Infections**

Did you think Candida, candida, candida? Well - lock up at Trichosporon!

**220. Yellow Fever (and other VHF)**

See Section on Viral Haemorrhaging Fevers.
