

THE BLACK BOX LFG (LOW FREQUENCY GENERATOR) - TBB LFG

The Black Box is a new generation of a frequency generator. It has been designed to replace old generation of so called zappers / Rife machines where direct connection with electrodes or induction loop were standard requirement. TBB LFG has similar elements except they were built in inside the casing.

The device was developed with a thought of creating a tool enabling removal of nanotechnology which was implanted in every human being with use of e.g. chemtrails and vaccinations.

The device is programmable between 1Hz and 30.000Hz and within 0.01Hz adjustment.

THESE ARE THE DESIGN ADVANTAGES OF THE BLACK BOX LFG:

- Small in size - approximate in size of your mobile phone which means you can take it with you anywhere you like (unlike plasma generator)
- Proven working range - 1.5m
- Unproven working range with homeopathic approach - possibly as far as 4-6m
- Application for the entire family in one go - as long as all of the members are gathered in one room
- Freedom from electrodes, loops and other wiring and laptop connections;
- The above parameters make The Black Box close to being on par with plasma generators - except - the size and the price cannot be beaten.

WORKING RANGE

The working range of TBB LFG is between 1.00Hz to 30kHz. The device can also be programmed to sweep between specified two values - e.g. 58.40 - 58.42Hz. Similarly to other devices with similar applications the calibration tolerances of TBB LFG is set at 0.05%. This translates to +/-0.025Hz proportionate to 100Hz. It is important to understand that because of the above - working with high frequencies may be very ineffective.

According to the latest scientific research - using frequencies between 10Hz and 100Hz could be the most effective approach. And possibly this is why the use of resonance in high frequency applications has failed so many people leading to disappointment.
